Easy • Score 80/80 Spring Hibernate

Problem statement

In continuation to the **tax management application**, now we need to implement the sign-in with Google feature by OAuth2.

▼ Tasks:-

1. Complete the application.yml and TaxSecurityConfig file by adding the required configuration for oauth2 and finishing the oidcUserService.
2. Add the required dependencies for oauth2 and thyme leaf into the pom.xml file.
3. Complete the login.html file by adding the required input fields and sign in with the Google button.
4. Finally, test your application.
