 Bank Account Registration Part II 

Easy • Score 80/80 Spring Hibernate

Problem statement [Send feedback](#)

In continuation of the **Bank Account Registration** application, now you have to take context using `SpringApplication.run`. Complete the application accordingly.

You are supposed to use the camel-case naming convention for writing the bean name inside the `@Component` Annotation where required.

- Example: I have a class with the name `savingsAccount`, and the bean name for it will be `"savingsAccount"`.
