Easy ▾ Score 80/80 Spring Hibernate

Problem statement

Continuing the **TaxEase** application, a new role, "**ADMIN**" is introduced. Now, only the admin can approve or reject any Tax filing. Also, the authentication mechanism for the application is changed to HTTP-basic authentication.

▼ API Access Rules:-

The APIs mentioned below should only be accessible by the admin and the rest of the APIs should be accessible by the normal user.

1. POST "/api/tax/approve/{id}": This API allows the user to approve a Tax Record by its ID.
2. POST "/api/tax/reject/{id}": This API allows users to reject a Tax Record by its ID.

Make changes in the project accordingly.

▼ Tasks:-

1. Create a new user with the following information:
 - username: "steve"
 - password: "abc123"
 - role: "ADMIN"
2. Use antmatchers to make the APIs accessible to their specific roles.
3. Test the application using Postman.

Output:
